

THE DOW AGROSCIENCES LONG LASTING TERMITE CONTROL

GLADIATOR 4TC

The number one termiticide for use in buildings, prefabricated /timber houses, and treatment of termite nests in lawns, gardens, and sugar cane. It is a special formulation, which is long lasting when applied in the soil and readily breaks down in the open air and sunlight.

Active ingredient : chlorpyrifos 480g/l

Formulation : Termiticide Concentrate (TC)

Directions for use

Mixing

Prepare aqueous solution of 1% concentration by mixing 1litre of Gladiator 4TC in 48litres of water. Then use recommended

Concrete slabs under construction

1. Treat the outside of the foundation wall trenches with 6-12litres of the solution per linear meter and to the depths of 40-75 cm .The higher rates are for deeper foundations. Replace the soil and apply another 8-16litres of the solution per linear meter. Finally cover the trench and fill the treated soil with a thin layer of untreated soil.
2. Apply 6-9litres of the solution per square meter under the slab, entrance platforms, and porches. Ensure uniform coverage. The higher rate is for slabs on gravel, cinder and coarse materials.

Established concrete slab buildings

Prepare 40-75cm deep trenches along the outside foundation walls. Treat as for buildings under construction. Drill along the inner foundation walls and selected floor sites at intervals of 45cm and inject the gladiator4TC solution under the concrete slab. Cover the drilled holes.

Mud floor houses under construction

Treat the external surfaces of the pole holes with Gladiator4Tc solution to the depth of 40-75cm. Dip the poles into the Gladiator 4TC solution. Prepare 40-75cm deep trenches along the outside walls. Treat as for buildings under construction.

Established mud floor houses

Prepare 40-75cm deep trenches along the outside walls and treat as for building under construction. Drill along the inner walls and selected floor sites at intervals of 45cm and inject the solution to depths of 40-75cm then cover the drill holes.

The proven leading termiticide all round the world

Termite nests

Remove the top 15cm of the soil and pour the solution down the tunnels.
Replace the soil after treatment.

Lawns and Gardens

Spray affected areas at the rates of 1.5litres of the solution per 10square meters. Incorporate the spray into the soil.

Timber

Mix 1litre of gladiator 4TC in 24litres of water and spray the timber thoroughly to point of runoff. Soak mounds of fencing poles for 30minutes and treat the soil in holes by pouring in the solution by the water can or bucket.

THE GREAT BENEFITS

- The only organophosphorous insecticide fully tested and recommended for termite control in Kenya.
- Has been tested for many years in the USA and demonstrated control for over 10 years.
- Has very low water solubility and does not leach through non target sites
- It s bio-friendly, it breaks readily in open sunlight and does not build up in the environment.
- In commercial applications, its concentration in the soil is less than 1ppm and has little or no harmful effect on other soil organisms.
- For all its residual power it can be cleaned up with soap and water or readily deactivated if necessary using house hold bleach.

AVAILABLE PACKS

24x250ml 12x1lt 4x5lt
