

HYGROTECH

Old Faithful & still going

Dryland-rows: 25kg/ha
Irrigation-rows: 25 - 50kg/ha

KOW KANDY

- Excellent spring and summer pasture for cattle and sheep, which displays remarkable production rates.
- Excellent flavour, nutritional content and yield, as well as genuine field robustness.
- Withstands and reacts better to drought than most other sorghum sudangrass hybrids.
- Livestock prefers the taste of Kow Kandy to other similar pastures.
- Even baled stems of Kow Kandy are readily consumed by livestock.

Improved Forage Sorghums

SUMMER ANNUAL FORAGES

High quality forage sorghums have been tagged in South Africa as being prone to lodging.

HYGROTECH has secured high quality forage sorghums with zero to very low lodging. No miracle, just sound genetics and breeding by one of the largest fodder sorghum producing companies in USA

ADVANTAGES OF THESE CROPS:

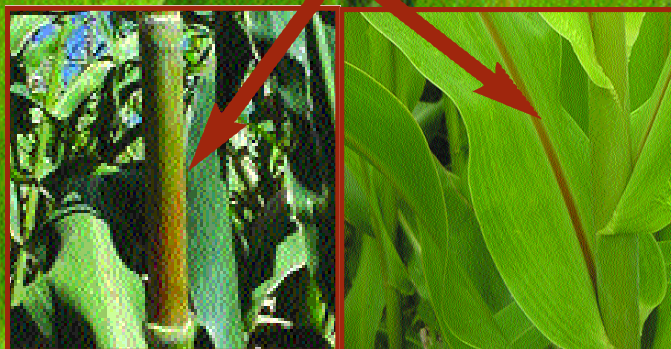

- *Later planting dates are possible*
- *Better drought tolerance*
- *Two or more harvests are possible*
- *Relatively 'high' dry matter content*
- *High feed value of BMR forage sorghums*

SIGNIFICANCE of BMR

(brown midrib) forage sorghums:

- Lignin content reduced by 40 - 60%
- Digestibility increased by 15 - 30%
- Forage palatability increased significantly

BMR IDENTIFICATION
